The Fund may also invest in hybrid securities and equity-related securities, such as convertible debentures, convertible preferred stock, debt instruments with warrants attached, which may embed financial derivative instruments and which are issued by or give exposure to the performance of the Greater China Region. ## What are the risks and what could I get in return?

### Risk Indicator

The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this Fund compared to other products. It shows how likely it is that the Fund will lose money because of movements in the markets or because we are not able to pay you.

We have classified this Fund as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact the capacity of NBAMIL to pay you.

Beside the risks included in the risk indicator, for other risks materially relevant to the Fund which are not captured by the risk indicator, please refer to the Prospectus and/or Supplement at [www.nb.com/en/gb/legal-documents](http://www.nb.com/en/gb/legal-documents). The Fund does not include any protection from future market performance so you could lose some or all of your investment. If we are unable to pay you what is owed, you could lose your entire investment.

## Performance scenarios

The figures shown include all the costs of the Fund itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back. What you will get from this Fund depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the Fund/representative portfolio over the last 10 years.

No investor guarantee or compensation scheme applies to this product.

## What are the costs?

The person advising on or selling you this Fund may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the Fund and how well the Fund does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed, in the first year you would get back the amount that you invested (0% annual return). For the other holding period, we have assumed the Fund performs as shown in the moderate scenario and the investment is USD 10,000.

<b>Total costs</b>	721 USD	1,338 USD
<b>Annual cost impact (*)</b>	7.2%	3.3%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 0.1% before costs and -3.2% after costs.
